

Spare Parts Manufacture Through Reverse Engineering

High-quality, cost-effective, fast

As a system operator, you have to rely on the availability of your pump systems.

But deliveries of spare parts often unnecessarily delay repair and maintenance work that needs to be carried out. That's why we consider it vital that spare parts are manufactured and delivered as quickly and cost-effectively as possible. And that goes for spare parts from other manufacturers too. Specifically, for process pumps from all types manufactured by different brands, we offer a wide range of high-quality spare parts for all standard and engineered pump sizes. This includes wear plates, impellers and shafts as well as bearing and casing parts, seal elements and screws. Parts are normally delivered within just a few weeks. We have vast experience in power/energy, process plants and O&G segments. Our expertise in the field of reverse engineering allows us to manufacture components that are no longer available very short space of time. This means finding the right solution in the case of emergencies too. Our extensive spare parts concept is complemented by a wide range of services for pumps & valves, and other equipment.

Your benefits:

- Single-source maintenance, repair, servicing, and spare parts management for your pump systems, regardless of the manufacturer
- High level of quality at reasonable prices
- Short delivery times
- Reliability thanks to years of experience
- Warranty on all repair services
- Consulting services for optimizing your systems
- Material upgrading capability for longer and durable operation.
