Lighting control systems

From simple wall-mounted dimmers to comprehensive lighting management software systems, Philips offers the right control solution for all of your lighting needs. Whether your lighting system includes incandescent, fluorescent, or LED lamps and luminaires, Philips controls allow you to enhance comfort, support tasks, ensure the safe navigation of spaces, and save energy. Combining digital show controllers with color-changing and tunable white light LED luminaires allows you to transform environments with dynamic, full-color light shows. Sophisticated lighting management software offers centralized, remote lightpoint management, supporting connected lighting systems that provide the best illumination experiences, maximize energy efficiency and resiliency, and offer extraordinary value beyond illumination.

UV light disinfection

Ultraviolet radiation has enough energy to break down the chemical bonds between electrons and atoms. That's why it can be harmful to eyes and skin (sunburn), but why it is also benefit for disinfecting surfaces and purifying air.

Benefits of UV-C disinfection technology

Trusted

UV-C technology is used for over 40 years²

Effective

All bacteria and viruses tested to date respond to UV-C disinfection²

Fast

Disinfects surfaces and objects in a matter of minutes

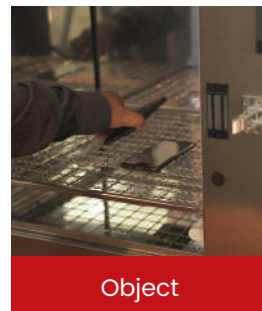

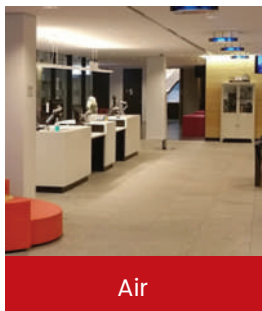

Versatile

Can be used in numerous applications, such as offices, schools, stores and public transport

UV-C lighting: Application fields

We offer a full range of UV lamps, luminaires, chambers and control systems that are suitable for use in air, surface, objects and water disinfection; both for residential and professional applications.
